

Performance & Settlement

Today, leading health plans have 35-50% of medical spend in alternative payment arrangements, totaling hundreds of millions of dollars annually, with upwards of 100 unique arrangements. This extensive medical spend is usually managed through a manual, error-prone, time-consuming, and costly financial settlement and payment reconciliation process.

To combat this, we're introducing NASCO's Performance and Settlement solution—a cloud-based, unified platform that supports end-to-end management of all types of alternative payment provider contracts and vendor benefit arrangements.

This purpose-built solution:

- Catalogues and codifies arrangement terms
- Tracks performance, systemizing financial and quality reporting
- Streamlines and automates a payer's entire settlement operation

With NASCO's Performance and Settlement, you can manage vendor and provider arrangements end-to-end to enable value-based strategies, analytics-based performance tracking, and financial settlement. Plus, it gives you the ability to audit, manage, and settle all your complex arrangements.
